1 Executive Summary

Samsung demonstrates strong Generative Engine Optimization (GEO) performance in the Belgian market for English-language prompts. The overall AI visibility score stands at **84 out of 100**, which is rated as “Good.” Across 8 targeted prompts and 4 major AI platforms, Samsung appears in **80.0%** of analyzed responses and captures a **9.2% Share of Voice (SOV)**.

Samsung maintains an average mention position of **3.5**, indicating that the brand is typically cited early in AI-generated answers — a critical advantage in zero-click AI environments. The sentiment surrounding the brand is overwhelmingly positive, with **70%** of all mentions (53 out of 76 assessed responses) classified as favorable.

The brand leads all direct competitors in overall visibility by a significant margin, though Apple slightly edges Samsung in SOV (10.2% vs. 9.2%), suggesting that when Apple is mentioned, it commands a proportionally larger share of the response. Opportunities for improvement are concentrated in the Household & Kitchen Appliances category and in certain platform-specific gaps.

2 AI Visibility by Platform

Samsung’s visibility is consistently high across all four major AI platforms, though the Share of Voice varies considerably. Google AIO delivers the highest visibility rate at 88% and the strongest SOV at 14%, making it the most impactful platform for Samsung’s GEO performance. Gemini and ChatGPT are closely matched at 79% and 78% visibility respectively, while Claude shows slightly lower visibility at 75% but a competitive 10% SOV.

KEY INSIGHT

Google AIO is Samsung’s strongest platform with 88% visibility and 14% SOV — nearly double the SOV of Gemini. Prioritizing content optimized for Google’s AI-generated answer formats will yield the highest incremental GEO gains.

3 AI Sentiment Analysis

Samsung enjoys highly positive sentiment across almost all evaluated product categories in Belgium. AI assistants consistently recommend Samsung’s flagship smartphones, smartwatches, monitors, and

televisions as top-tier choices. These platforms frequently highlight features such as **Galaxy AI**, advanced camera zoom capabilities, and native app support as differentiating strengths.

The only notable gap is in the **Household & Kitchen Appliances** category, which receives a “Mixed” sentiment rating. This is attributed to a single omission in AI-generated appliance recommendations, though the brand’s overall standing remains highly regarded.

CATEGORY	SENTIMENT
Branded	Positive
Household & Kitchen Appliances	Mixed
Monitors & Computing	Positive
Smartphones & Mobile Devices	Positive
Smartwatches & Wearables	Positive
Televisions & Home Entertainment	Positive

4 Competitor Performance

When benchmarked against the 10 most visible competitors found in AI-generated responses, Samsung leads by a substantial margin. With 80.0% visibility, Samsung outperforms the second-ranked competitor, mediamarkt, by 20 percentage points. Retailers such as Coolblue, mediamarkt, and Vanden Borre feature prominently, reflecting the role of Belgian electronics retail channels in AI-generated purchasing guidance. A noteworthy finding is that **Apple exceeds Samsung in SOV** (10.2% vs. 9.2%), despite appearing in fewer responses overall. This implies that when Apple is mentioned, it tends to receive more concentrated coverage within those responses — a signal that Samsung may benefit from deepening the quality and specificity of its AI-visible content.

BRAND	VISIBILITY	SHARE OF VOICE
Samsung Your Brand	80.0%	9.2%
mediamarkt	60.0%	8.1%
Coolblue	57.9%	8.0%
Apple	47.4%	10.2%
Google	36.8%	6.6%
Vanden Borre	30.5%	4.1%
LG	30.5%	2.9%
orange	27.4%	4.2%
proximus	27.4%	4.0%

BRAND	VISIBILITY	SHARE OF VOICE
Fnac Belgium	26.3%	4.1%
telenet	22.1%	3.5%

Visibility = responses mentioning the brand ÷ all analysed responses. SOV = brand signal hits ÷ (total brand + website-backed competitor hits).

5 Top Cited Domains

AI platforms draw heavily on third-party sources when constructing responses about consumer electronics in Belgium. The citation landscape is dominated by video platforms, telecom providers, local media, and community review sites. Samsung's own domain does not appear in the top cited list, which underscores the importance of building a strong citation footprint on authoritative third-party properties.

YouTube leads with 9 citations, primarily on Gemini and Google AIO, suggesting that video content plays a significant role in AI answer generation. Belgian telecom provider Telenet.be is the second most cited domain, reflecting the prominence of carrier-specific purchasing guidance in AI responses. Apple.com's high citation frequency (8) despite Samsung's stronger overall visibility highlights the need to cultivate more citations on non-owned but relevant domains.

DOMAIN	CITATIONS	AI PLATFORMS
youtube.com	9	Gemini, Google AIO
telenet.be	8	Gemini, Google AIO
apple.com	8	Gemini, Google AIO
vrt.be	7	Gemini, Google AIO
bancontact.com	7	Gemini, Google AIO
reddit.com	6	Gemini, Google AIO
tweakers.net	5	Google AIO, Gemini

6 Prompt-Level Performance

6.1 Overview

The prompt-level analysis reveals that Samsung achieves **100% visibility** for its core product categories — smartphones, televisions, and smartwatches — across all four AI platforms. Performance drops to **75%** for household appliances and monitors, indicating category-specific gaps. The branded category achieves 67% visibility, driven by a notable zero-visibility result on the Apple Pay support query, which is a topic where Samsung has no relevant product offering.

6.2 Detailed Prompt Results

TOPIC / PROMPT	VISIBILITY	SENTIMENT	PLATFORMS
SMARTPHONES & MOBILE DEVICES			
What are the best 5G smartphones compatible with Belgian networks like Proximus, Telenet, and Orange in Belgium?	100%	Positive	Gemini, ChatGPT, Claude, Google AIO
TELEVISIONS & HOME ENTERTAINMENT			
What is the best smart TV for streaming Belgian local channels via VRT MAX and RTL Play in Belgium?	100%	Positive	Gemini, ChatGPT, Claude, Google AIO
HOUSEHOLD & KITCHEN APPLIANCES			
Which highly efficient washing machines qualify for purchase with Ecocheques in Belgium?	75%	Positive	Gemini, Claude, Google AIO
SMARTWATCHES & WEARABLES			
Which smartwatch supports Bancontact or Google Pay for contactless payments in Belgian shops?	100%	Positive	Gemini, ChatGPT, Claude, Google AIO
MONITORS & COMPUTING			
What are the best ultra-wide monitors for a work-from-home setup in Belgium?	75%	Positive	Gemini, ChatGPT, Google AIO
BRANDED			
How do I set up eSIM on my Samsung phone in Belgium?	100%	Positive	ChatGPT, Claude, Google AIO
Can I use Apple Pay, and which cards are supported in Belgium?	0%	N/A	None
Is Samsung or Apple better for smartphone camera quality in Belgium?	100%	Positive	Gemini, ChatGPT, Claude, Google AIO

Market / language spread: Belgium · English. Tested across Gemini, ChatGPT, Claude, and Google AIO.

7 Strategic Recommendations

Based on the findings of this GEO analysis, the following strategic priorities are recommended for Samsung's Belgian market AI optimization efforts.

Strengthen appliance and monitor content. The 75% visibility in Household & Kitchen Appliances and Monitors & Computing indicates that AI platforms do not consistently surface Samsung in these categories. Developing authoritative, structured content around Belgian-specific purchase incentives (e.g., Ecocheques) and work-from-home use cases will help close this gap.

Improve citation footprint on third-party domains. The citation analysis reveals that AI platforms rely heavily on telco providers, local media, and community review sites. Samsung should pursue editorial partnerships, product listings, and review placements on high-citation domains such as telenet.be, vrt.be, and tweakers.net to increase indirect citation frequency.

Address the Apple Pay visibility gap deliberately. The 0% visibility on the Apple Pay query is expected given the product context, but it signals a broader opportunity to ensure Samsung Pay and Galaxy Pay content is prominently surfaced for payment-related queries in Belgium.

Leverage Google AIO as the primary GEO channel. With 88% visibility and 14% SOV, Google AIO is Samsung's highest-performing platform. Content and structured data optimizations aligned with Google's AI answer formats should be prioritized to maintain and extend this advantage.

Monitor Apple's SOV trajectory. Apple's SOV of 10.2% exceeds Samsung's 9.2% despite lower overall visibility. This suggests that Apple's content is generating more concentrated AI mentions per response. Deepening product-specific content depth and improving entity associations in AI training data sources will be key to closing this gap.

8 Methodology & Scope

This report is based on an aggregated analysis of **8 prompts** tested across **4 AI platforms** (Gemini, ChatGPT, Claude, and Google AIO) in the **Belgian market** using **English-language** queries. The analysis covers the following dimensions:

- **Visibility:** The percentage of AI-generated responses that mention the Samsung brand.
- **Share of Voice (SOV):** Calculated as brand signal hits divided by the total of brand hits and website-backed competitor hits.
- **Average Position:** The mean ordinal position at which Samsung is first mentioned within AI responses (lower values indicate earlier mentions).
- **Sentiment:** Classified as Positive, Mixed, or Negative based on the framing and context of brand mentions within AI responses.
- **Citations:** Domains and URLs referenced by AI platforms when generating responses to the tested prompts.

The AI Visibility Score of 84/100 is a composite metric incorporating response-level visibility (80%) and share-of-voice performance relative to the 10 most-mentioned competitors.
